

TRAINING GOLF CLUB

Abstract of the Disclosure

A training golf club that is used when practicing a golf swing or hitting golf
5 balls on a practice range. The training golf club is provided with a shaft that has
two weights added into the shaft, thereby allowing the club to assist the golfer in
producing a golf swing that is in a plane and has a fluid tempo to improve the golf
swing effectiveness. A first weight is preferably added internally in the club shaft
between the grip and the head end of the shaft, and a second weight is
10 preferably added internally at the head end of the shaft where the shaft attaches
to the club head.
